COMMENTS FOR ALL ALLOYS:	
Material is produced in the "As Rolled" condition.	Springs are manufactured via the Hot Wound
procedure, quenched and tempered. Each spring	is checked for Rockwell Hardness to insure
the proper temper is achieved. Temper hardness	should range between HRC 41 and HRC 49.
If the hardness exceeds HRC 49, brittle properties	s could be produced, increasing failure possibilities.
Bar lengths in general range from 40' to 45'.	
HRC 41 = 187,000 psi tensile	HRC 49 = 253,000 psi tensile
Note: Virtually all Hot Rolled Alloy Bar stocked	by Suhm is turned and polished.

#### COMMENTS:

Material is produced in the "Cold Rolled" / Annealed condition. After coiling springs should be aged to the H 900 condition. Bars with hardness value of HRC 44 will have estimated tensile of 200 KSI. As a general rule, bar lengths are 12 feet long. Some sizes are available up to 20 feet in length. Check with a Suhm representative to verify lengths.

These data are provided as a reference guide only and are not intended for design purposes. Strength values and sizes are subject to change. Please check with a Suhm Spring representative for confirmation.

#### COMMENTS:

Material is produced in either the solution annealed or solution annealed/aged condition. This specification only requires that minimum strength values be met. If necessary check with a Suhm representative to obtain actual capabilities for tensile and yield. Aging time and temperatures are extensive (20 Hrs. @ 1300°F) to produce the required strengths.

Bar lengths in general will average 12' to 14'; however, Suhm maintains a stocking arrangement to have available 10' - 20' lengths on some sizes. Some sizes are available in lengths up to 35'. Check with a Suhm representative to verify sizes and lengths.

## TENSILE STRENGTH CHART VALUES INDICATE COLD DRAWN AND AGED MATERIAL

Up to 0.187, incl.	190,000 - 210,000	10	20
Over 0.187 to 0.375 incl.	185,000 - 205,000	10	20
Over 0.375 to 0.625 incl.	180,000 - 200,000	8	20

#### COMMENTS:

Material has been cold drawn 20 - 35% final reduction. Additional cold reduction may be possible to produce higher tensile/yield strength. Larger sizes can be obtained in spring tempered and annealed condition. Check with a Suhm representative for size and tensile strengths.

#### COMMENTS:

Material is produced in the "As Rolled" condition. Springs produced from wire size diameters are "Cold Wound" and Tempered. Springs produced from bar size diameters are "Hot Wound", quenched, and tempered. Each Hot Wound spring is hardness checked to insure proper hardness. Tempered hardness should range between  $41R_{-}^{c}$  and  $49R_{-}^{c}$ . Bar lengths range from 15' to 19'.

HRC 41 = 187,000 psi tensile HRC 49 = 253,000 psi tensile
